

## **Position**

Associate, Renewable Energy Project Finance, Somerville, MA

## **Key Responsibilities**

An Associate within Raise Green is proficient in project finance modeling, workflow development, research of market conditions, and assessing the feasibility of potential projects. A successful candidate will be comfortable in an evolving startup environment while adhering to established due diligence criteria and regulatory compliance procedures. With the guidance of the executive team, an Associate maintains responsibility for a portfolio of project finance issuers and investors. Responsibilities include due diligence, process evaluation, repeat communications with issuers, and presentation of analytical findings.

## **The Impact**

Raise Green brings transparency, community, and egalitarianism to the financial markets by presenting an alternative asset class of impact investment opportunities with green crowdfunded private equity. Raise Green helps people to start and grow community-led climate solution projects. As an early-stage start-up, Raise Green is pioneering democratized and decentralized inclusive finance for climate projects through easier access to capital formation, replicable project documents, and enterprise partnerships to create solutions to climate change and income inequality that scale at the speed of problem.

## **About Raise Green**

Raise Green is a fintech startup designed to empower individuals and organizations to take action on climate change. We are an investment platform, licensed by the SEC and FINRA, that offers templates for renewable energy project development. We enable community-scale clean energy financing needed to help everyone play their part in meeting the targets of the Paris Agreement on climate change, and the Sustainable Development Goals. Raise Green offers scalable solutions to wicked problems through a local, practical lens.

## **Qualifications**

- 3+ years experience in an investment bank, financial institution, or related sector
- Deep understanding of project finance and accounting concepts
- Proficiency with visual display of quantitative information
- Strong Excel skills with ability to prepare forecasts based upon reasoned assumptions
- Familiarity with APIs and statistical programming software (R or Python)
- Passion for sustainable finance and impact investing
